About Ocugen, Inc.

Ocugen, Inc. is a pioneering biotechnology company developing gene therapies for blindness diseases. The Company's breakthrough modifier gene therapy platform has the potential to address significant unmet medical needs across large patient populations through a gene-agnostic approach. Unlike traditional gene therapies and gene-editing technologies that target a single gene mutation, Ocugen's modifier gene therapies are designed to address the underlying disease biology by restoring balance across multiple gene networks. The Company is currently advancing programs for inherited retinal diseases and other causes of blindness that affect millions worldwide, including retinitis pigmentosa, Stargardt disease, and geographic atrophy, an advanced form of dry age-related macular degeneration.
